

## Jotaplast H

### Product description

#### Type

An economy matt emulsion paint based on modified acrylic binder.

#### Features and benefits

It is 100% free from Alkylphenol Ethoxylates (APEO).

Provides good application properties, good hiding power and flow.

With anti-fungus properties inhibits growth of fungi on the wall.

#### Recommended use

For interior application.

#### Substrate

On concrete, masonry surfaces and soft board surfaces.

### Product data

<b>Packaging size</b>	5L,15L and 18L
<b>Colours</b>	White and as per colour card.
<b>Solids by volume</b>	33 ± 2 volume%

### Application data

#### Remarks

Handle with care. Stir well before use.

#### Application equipment / methods

By brush, roller, airless spray or conventional spray.

#### Spreading rate per coat

Theoretical Spreading rate per coat (m<sup>2</sup>/l) : 8.3 - 11

Spreading rate depends on film thickness applied, type of texture, surface porosity, imperfections, temperature, wastage during painting etc.

#### Recommended film thickness per coat

Dry film thickness : 30 - 40 microns (µm)  
Wet film thickness : 91 - 121 microns (µm)

Film thickness will vary and is calculated as average.

### Thinner

Water

### Dilution

The paint is ready to use after proper stirring. If thinning is required, water may be added up to a maximum of 20%.

### Conditions during application

The temperature of the substrate should be minimum 10 °C and at least 3 °C above the dew point of the air, measured in the vicinity of the substrate. Good ventilation is usually required in confined areas to ensure proper drying.

### Drying times

Drying times are generally related to air circulation, temperature, film thickness and number of coats, and will be affected correspondingly. The figures given in the table are typical with:

Good ventilation (Outdoor exposure or free circulation of air)

Typical film thickness

One coat on top of inert substrate

The given data must be considered as guidelines only. The actual drying time and time before recoating may be shorter or longer, depending on the ambient temperature, film thickness, ventilation, humidity, underlying paint system, requirement for early handling and mechanical strength etc.

1. Recommended data given is, for recoating with the same generic type of paint.

2. In case of multi-coat application, drying times will be influenced by the number and sequence and by the total thickness of previous coats applied.

3. The surface should be dry and free from any contamination prior to application of the subsequent coat.

#### The drying time is measured by stated values:

Relative Humidity (RH) 50 %

Substrate temperature	10 °C	23 °C	40 °C
Surface (touch) dry	2 h	1 h	0.5 h
Hard dry	8 h	6 h	4 h
Dry to over coat, minimum	4 h	2 h	1 h

## Directions for use

### Surface preparation

The substrate must be sound, clean, dry and free from dust, oil, grease, laitance etc. All traces of form release agents/curing agents must be removed. A light sanding with suitable abrasive material is recommended before application. Any resulting dust/loose particles must be removed.

### Recommended paint system

#### Primer

Jotun Interior Primer (C) : 1 coat

#### Topcoat

Jotaplast (C) : 2 coats

### Remarks

Other systems may be specified, depending on area of use.

### Storage

The product must be stored in accordance with national regulations. Keep the containers in a dry, cool, well ventilated space and away from sources of heat and ignition. Containers must be kept tightly closed. Handle with care.

## Health and safety

Please observe the environmental and precautionary notices displayed on the container.

A Material Safety Data Sheet for the product has been issued.

Detailed information regarding health and safety risks and precautions for the use of this product is specified in the product's Safety Data Sheet.

First-aid measures, refer to section 4.

Handling and storage, refer to section 7.

Transport information, refer to section 14.

Regulatory information, refer to section 15.
